ICT Lab 7 Tasks

Java Script

Name: Muhammad Farhan
Roll no: 25k-0538
Section: BCS-1K
Course: ICT
Course Instructor: Miss Syeda Tehreem Gilani

I have split my website into 3 separate parts, HTML, CSS and Java Script. I have done External for all of them instead of internally, it makes it much simpler in my opinion. I have provided PDFs of the codes of all 3 with screenshots, as well as a Zip file containing all 3 files themselves.

Java Script:

```
const form = document.getElementById('StudentRegistrationForm');

form.addEventListener('submit', function(event)

{

   event.preventDefault(); // This will stop the form from submitting the defualt values.

//here we are getting all the values of the form.

const fullname = document.getElementById('fullname').value.trim();

const email = document.getElementById('email').value.trim();

const password = document.getElementById('pass').value;

const confirmPassword = document.getElementById('confirm').value;

// This will check all the "required" fields from our registration form.

if (fullname === "")

   {

   alert("Please enter your full name.");

   return;

   }

if (email === "")

   {

   alert("Please enter your email.");

   return;
```

```
    }

// Here we are checking the Gender selection, first taking them as constants.
const genderMale = document.getElementById('male').checked;
const genderFemale = document.getElementById('female').checked;
const genderOther = document.getElementById('other').checked;
//Here we are checking if a gender is selected or not.
if (!genderMale && !genderFemale && !genderOther) {
    alert("Please select your gender.");
    return;
}

// Here we are taking department's value and seeing if its empty or not.
const department = document.getElementById('department').value;
if (department === "") {
    alert("Please select your department.");
    return;
}

if (password === "" || confirmPassword === "")
    {
    alert("Please enter and confirm your password.");
    return;
    }
// this will check if the password and confirm password match
if (password !== confirmPassword)
```

```
    {
    alert("Passwords do not match.");
    return;
    }
// this line will run if everything is okay.
alert("Registration Successful!");
form.reset(); //this will clear the form after submission
});
```

Question1.c | Question2.c | StudentRegistrationForm.html | StudentRegistrationFormStyle.CSS | StudentRegistrationFormFunction.JS

ICT_HTML_CSS > StudentRegistrationFormFunction.JS > form.addEventListener('submit') callback

```
const form = document.getElementById('StudentRegistrationForm');
form.addEventListener('submit', function(event)
{
    event.preventDefault(); // This will stop the form from submitting the defualt values.

//here we are getting all the values of the form.
const fullname = document.getElementById('fullname').value.trim();
const email = document.getElementById('email').value.trim();
const password = document.getElementById('pass').value;
const confirmPassword = document.getElementById('confirm').value;

// This will check all the "required" fields from our registration form.
if (fullname === "")
    {
    alert("Please enter your full name.");
    return;
    }

if (email === "")
    {
    alert("Please enter your email.");
    return;
    }

// Here we are checking the Gender selection, first taking them as constants.
const genderMale = document.getElementById('male').checked;
const genderFemale = document.getElementById('female').checked;
const genderOther = document.getElementById('other').checked;
//Here we are checking if a gender is selected or not.
if (!genderMale && !genderFemale && !genderOther) {
    alert("Please select your gender.");
    return;
}

// Here we are taking department's value and seeing if its empty or not.
const department = document.getElementById('department').value;
if (department === "") {
    alert("Please select your department.");
    return;
}
```

Question1.c | Question2.c | StudentRegistrationForm.html | StudentRegistrationFormStyle.CSS | StudentRegistrationFormFunction.JS

ICT_HTML_CSS > StudentRegistrationFormFunction.JS > form.addEventListener('submit') callback

```javascript
form.addEventListener('submit', function(event)
    {
    alert("Please enter your email.");
    return;
    }

// Here we are checking the Gender selection, first taking them as constants.
const genderMale = document.getElementById('male').checked;
const genderFemale = document.getElementById('female').checked;
const genderOther = document.getElementById('other').checked;
//Here we are checking if a gender is selected or not.
if (!genderMale && !genderFemale && !genderOther) {
    alert("Please select your gender.");
    return;
}

// Here we are taking department's value and seeing if its empty or not.
const department = document.getElementById('department').value;
if (department === "") {
    alert("Please select your department.");
    return;
}

if (password === "" || confirmPassword === "")
    {
    alert("Please enter and confirm your password.");
    return;
    }
// this will check if the password and confirm password match
if (password !== confirmPassword)
    {
    alert("Passwords do not match.");
    return;
    }
// this line will run if everything is okay.
alert("Registration Successful!");
form.reset(); //this will clear the form after submission
});
```
