Programming Fundamentals Lab #3

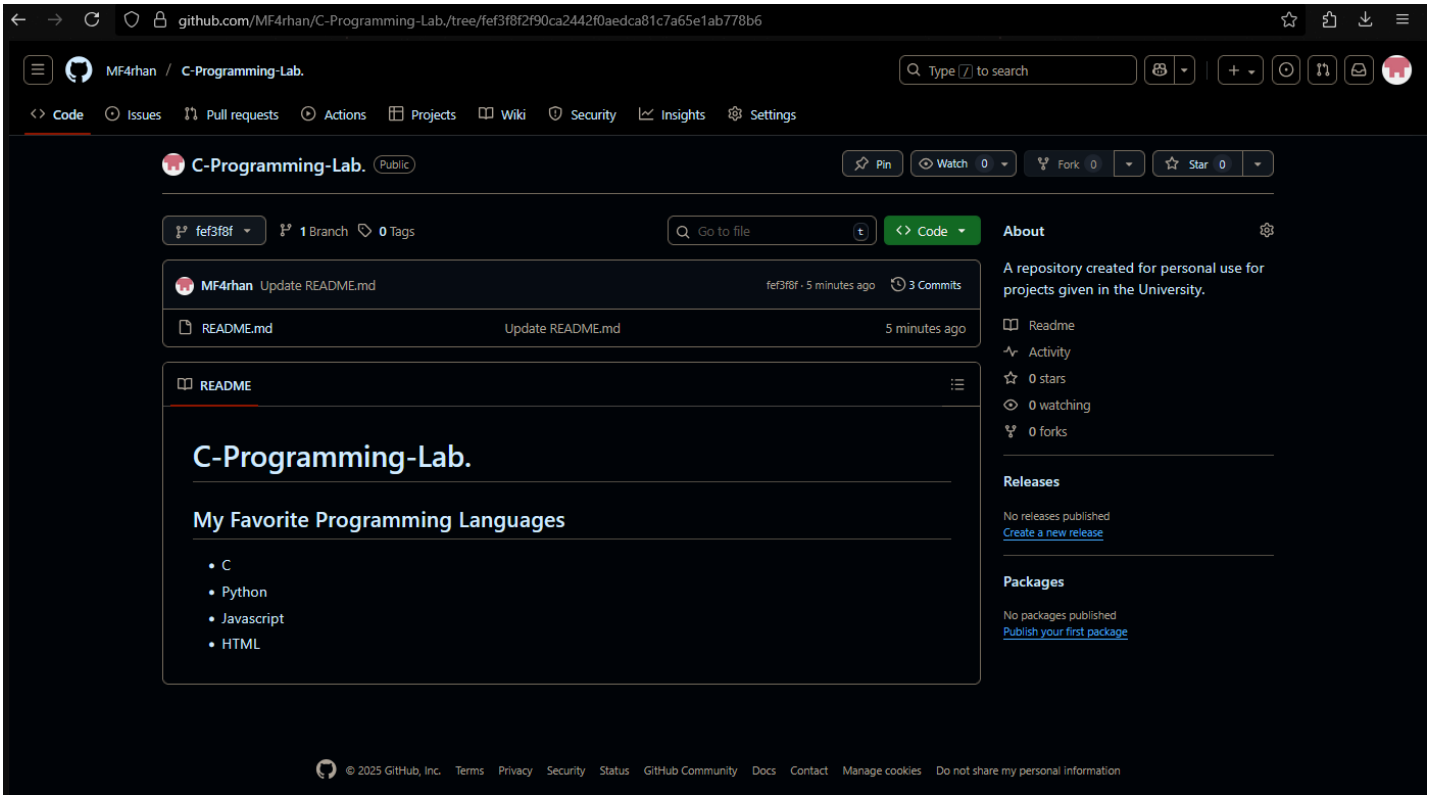
Name: Muhammad Farhan
Roll No: 25K-0538
Class: BCS-1K
Programming Fundamentals Lab
Assignment (7 Tasks)
Course Instructor: Sir Sheeraz Iqbal

Task #4: Create an Unordered List in Markdown

Objective:

● Edit the README.md file in your GitHub repository.
Add an unordered list of your favorite programming languages using * or -.
Use Markdown preview to confirm it renders correctly.

Link: https://github.com/MF4rhan/C-Programming-Lab./tree/fef3f8f2f90ca2442f0aedca81c7a65e1ab778b6

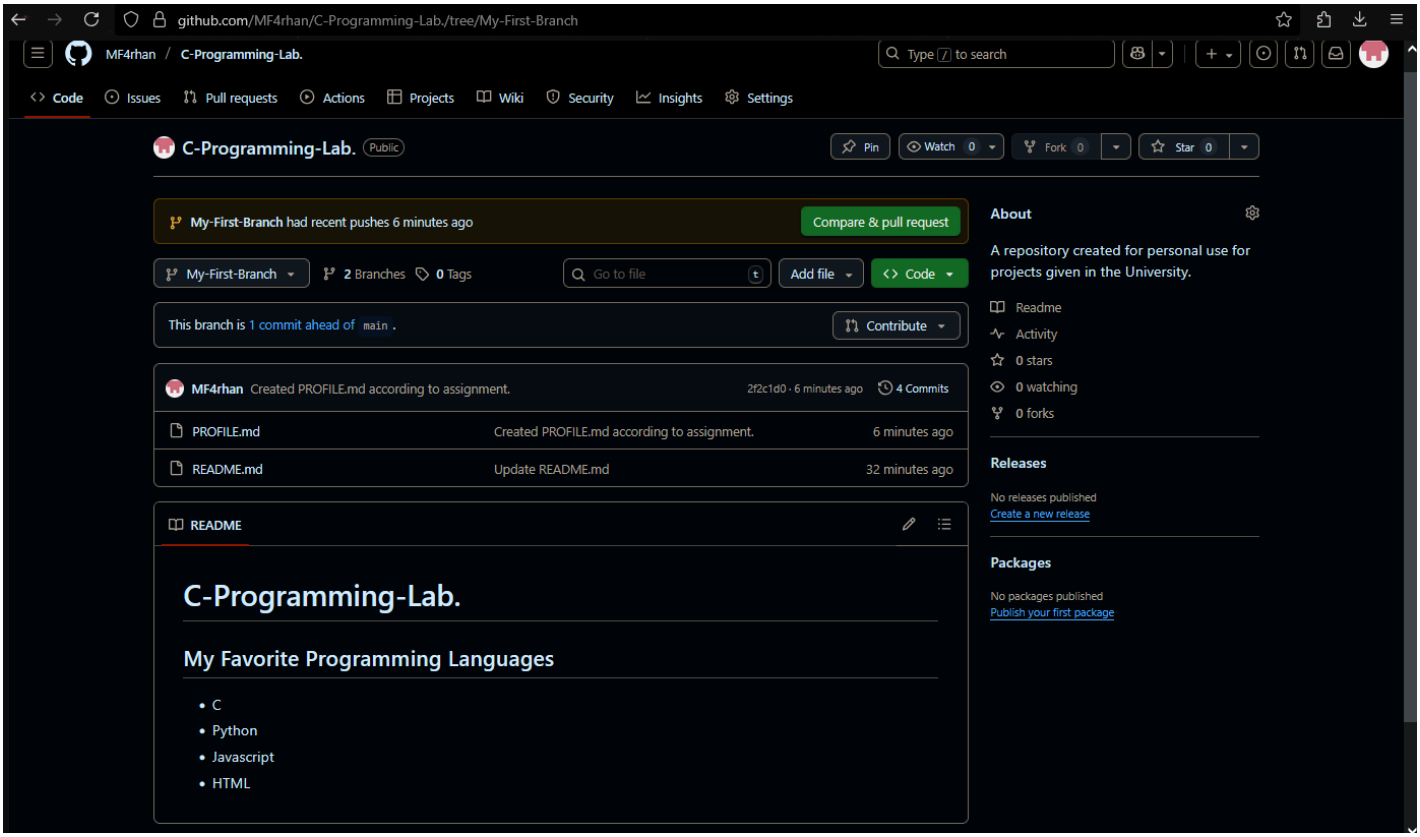


Task #5: Use GitHub Branching and Commit a File

Objective:

- Create a branch in your repository named my-first-branch.
- Create a new file named PROFILE.md.
- Write the text: Programming Fundamentals Fall 2025.
- Commit and push the file to your branch.

https://github.com/MF4rhan/C-Programming-Lab./commit/2f2c1d0e4f5b6afb287ca6fd624ae7bd28797bd4



Task #6: Create and Format Markdown Elements

Objective:

● Edit the README.md file.

Add at least one of each:

○ A heading (#)

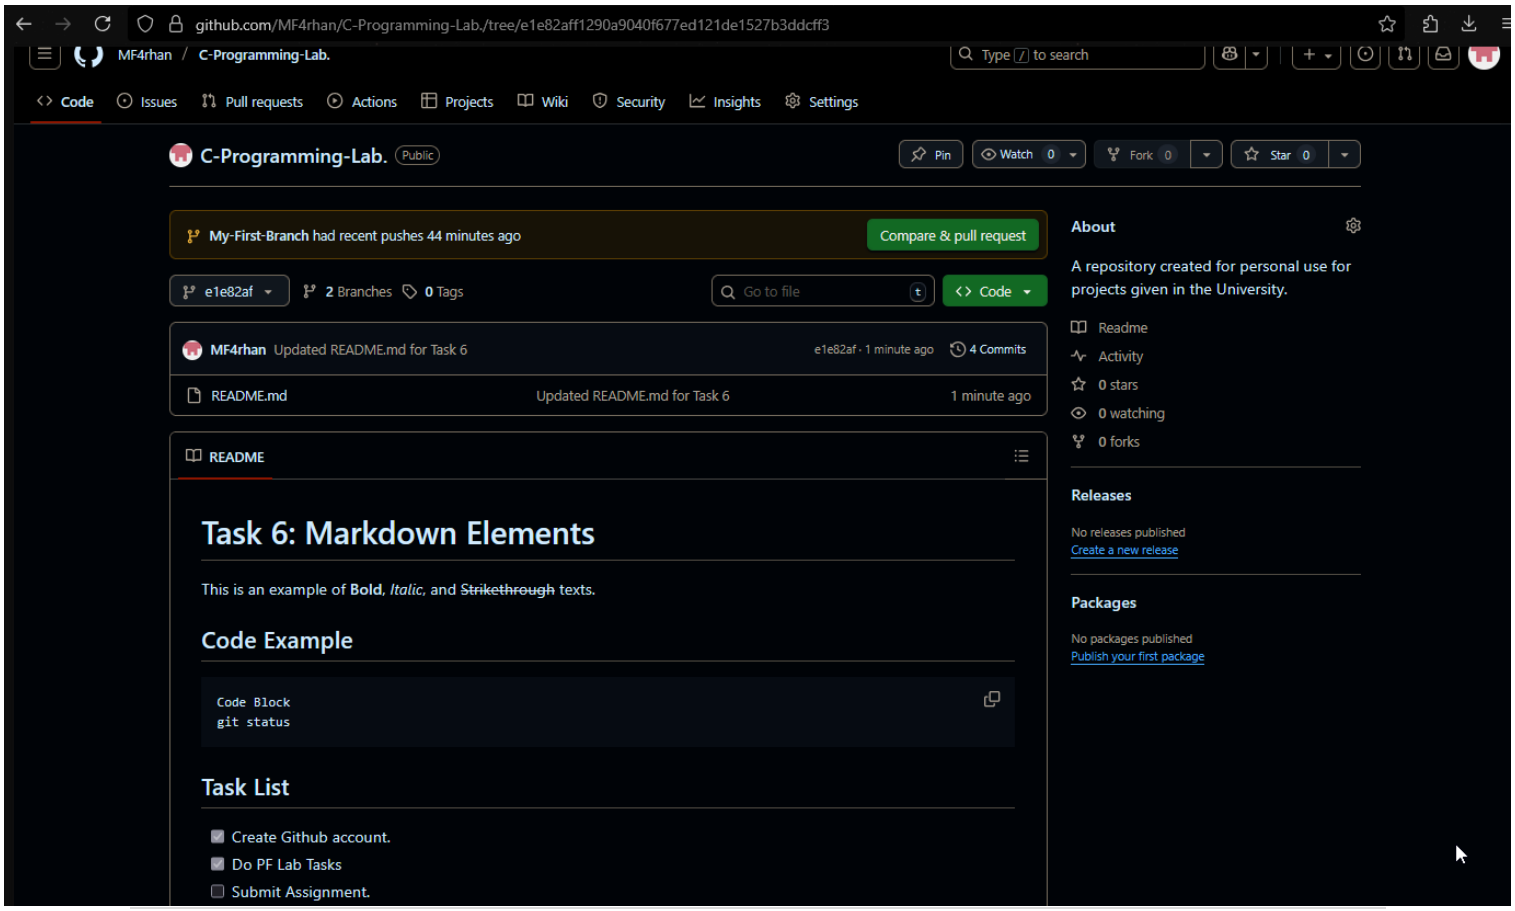
○ Bold and italic text (**bold**, *italic*)

○ A strikethrough (~~text~~)

○ A code block (e.g., git status)

○ A task list

https://github.com/MF4rhan/C-Programming-Lab./tree/e1e82aff1290a9040f677ed121de1527b3ddcff3



Task #7: Write a C Program with Variables and Input

Objective:

● Write a C program that:

○ Takes user input for age (int) and height (float).

○ Prints the values back using printf with format specifiers and 2-decimal precision.

● Save and run the program. Share a screenshot of the output.

Code:

```
#include <stdio.h>

#include<conio.h>

int main() {

   int a; float b;

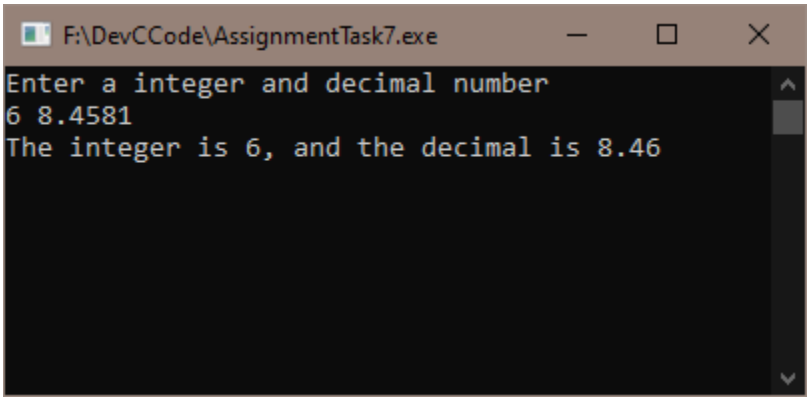
   printf("Enter a integer and decimal number\n");

   scanf("%d %f",&a,&b);

   printf("The integer is %d, and the decimal is %.2f",a,b);

   getch();

   return 0; }
```



Task #8: Demonstrate Escape Sequences in C

Objective:

● Write a C program using at least 4 different escape sequences, such as:

○ \n, \t, \\, *;

● Example output should use tabs, newlines, quotes, and backslashes.

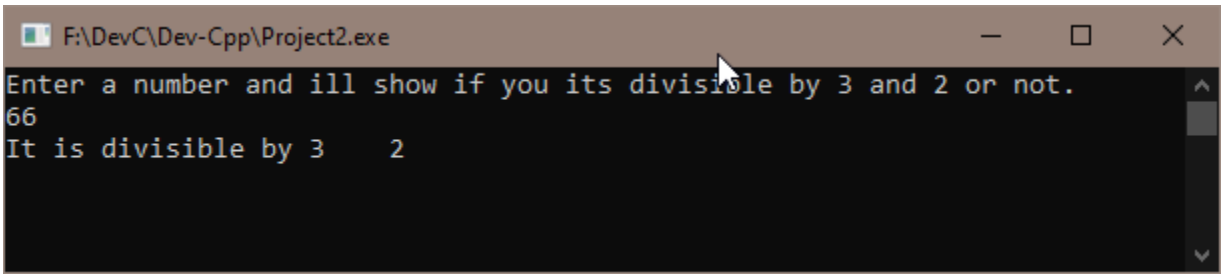
● Compile and run the program and include a screenshot of the output.

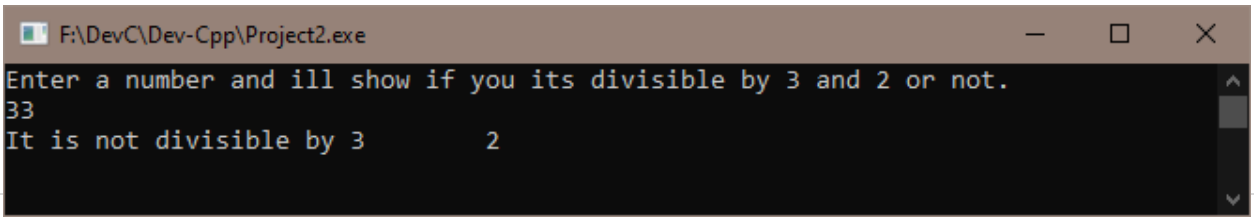
```
#include <stdio.h>
int main() {
   int a;
   printf("Enter a number and ill show if you its divisible by 3 and 2 or not.\n");
   scanf("%d",&a); // This will be user input
   /*
   Wrote a condition that checks if the input number is divisible by BOTH 2 and 3.
   If it is, then it will proceed into the IF block.
   If it is not, then it will proceed into the ELSE block
   */
   if (a%2==0 && a%3==0)
   {
      printf("It is divisible by 3\t2");
   }
   else
   {
      printf("It is not divisible by 3\t2");
   }
   return 0;
```

```
}
```

Or

```
#include <stdio.h>
#include <conio.h>
int main() {
   int a;
   printf("Enter a number and ill show if you its divisible by 3 and 2 or not.\n");
   scanf("%d",&a); // This will be user input
   /*
   Wrote a condition that checks if the input number is divisible by BOTH 2 and 3.
   If it is, then it will proceed into the IF block.
   If it is not, then it will proceed into the ELSE block
   */
   printf(a%2==0 && a%3==0?"It is Divisible by 2\t3":"It is Not Divisible by 2\t3");
   getch();
   return 0;
}
```





Task #9: Write a C Program to Calculate Age

Objective:

Create a C program that:

- Asks the user for their birth year.
- Asks the user for the current year.
- Calculates and displays the user's age using simple subtraction.

```
#include <stdio.h>

#include <conio.h>

int main() {

int BYear, CYear;

printf("I will calculate your Age.\n");

printf("Enter your Birth Year\n");

scanf("%d", &BYear);

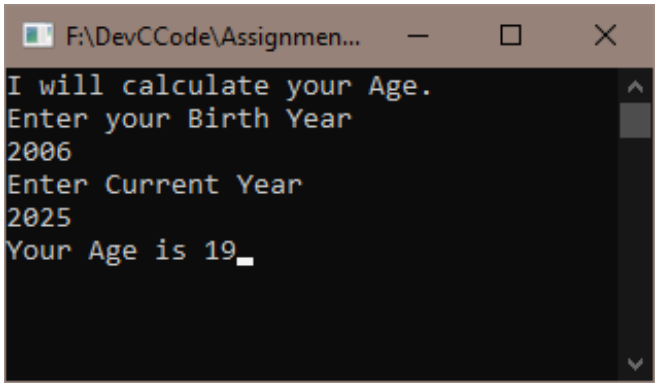
printf("Enter Current Year\n");

scanf("%d", &CYear);

printf("Your Age is %d", CYear-BYear);

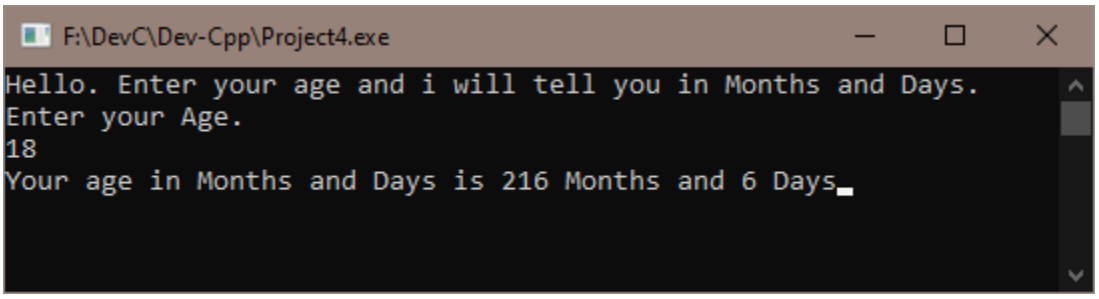
getch();

return 0; }
```



Task #10: Write a C Program to Convert Age into Months and Days

Objective:

Create a program that asks the user for their age in years and converts it into: Months & Days.


```
#include <stdio.h>

#include <conio.h>

int main() {

 int Age, Month, Days;

 printf("Hello. Enter your age and i will tell you in Months and Days.\n");

 printf("Enter your Age.\n");

scanf("%d", &Age); // User Age Input

Month=Age*12;  // Converting from years to months.

Days=Month%30; // converting remaining days of the current month to days.

printf("Your age in Months and Days is %d Months and %d Days", Month, Days); // Output

getch();

return 0; }
```
